 Project Manager:
 Gary Stechshulte
 Superintendent:
 Mike Schuerman

New Tiffin Mercy Hospital (Masonry)

Project inception date: 3/19/2007
Project completion date: 6/30/2008
Construction cost: \$1,600,000
Construction type: Hard Bid

Project scope:

This 102,000 square foot project consisted of interior masonry, exterior masonry and site work. Limestone sills/bands and watertables played an important role at Tiffin Mercy Hospital, especially with the site work where the limestone walls intergrated engraved brick pavers. Pre-cast medallions were also intergrated into the exterior facade. Stone veneer was used for the chapel and all of the main entrance to the hospital.

Project Accomplishments:

This project was built and designed in one phase. First, the shell was constructed, then the interior work followed. This project had complex roof profiles which created unique scaffolding set-ups, as well as, material staging. Precast medallions were used on the top profile of all walls. Tuttle used fieldstone in the chapel and the main entrance. Natural limestone sills and henders were used throughout the hospital.
